Prevent injuries - manage farm noise exposure

What is this about?

Identifying “noise hot spots” to reduce safety risks.

Why it matters

- Noise increases the risk of **accidents & worker stress**.
- It also causes **permanent hearing loss**.
- Noise exposure is **100% preventable**.

Why participate?

- Get a free noise exposure report
- Receive tailored insights about how to reduce noise
- Contribute to research that supports the ag community

What we will do:

- Visit your farm for a few hours
- Collect data anonymously during normal operations
- Place small sound monitors on workers' shirts or equipment

Cash incentives available.
